## Pi Day Mathematics Competition

Final Round 2019

## Question 1

While earlier attempts to calculate $\pi$ depended on polygonal approximations, more modern calculations use infinite series. One such series is the Madhava-Leibniz series:

$$
1-\frac{1}{3}+\frac{1}{5}-\frac{1}{7}+\frac{1}{9}-\frac{1}{11}+\cdots=\frac{\pi}{4}
$$

What is the value of the following, related series

$$
\frac{1}{1 \cdot 3}+\frac{1}{5 \cdot 7}+\frac{1}{9 \cdot 11}+\cdots ?
$$

## Question 2

What is the sum of all positive integers a which satisfy the condition $\frac{1}{15}<\frac{a}{10}<\frac{1}{3}$ ?

## Question 3

How many integers $x$ satisfy both of the two conditions

$$
|3 x+8|=3 x+8 \quad \text { and } \quad|2 x-5|=-2 x+5 ?
$$

## Question 4

Suppose we are given that $4^{x}-4^{x-1}=24$. What is the value of $x^{5 / x}$ ?

## Question 5

The parabola $y=a x^{2}+b x+c$ and the line $y=-2 x+4$ have common $x$ and $y$ intercepts (as shown in the figure). What is the value of the sum $a+b+c$ ?

## Question 6

Let $A B C$ and $F E D$ be right triangles. It is given that $|A B|=12$ $\mathrm{cm},|B C|=5 \mathrm{~cm},|F E|=16 \mathrm{~cm}$ and $|D E|=12 \mathrm{~cm}$. What is the difference $|D C|-|A F|$ ?

## Question 7

If $f(x-3)=(2 n-1) x+2 m+5$ is the identity function, what is the value of $n-m$ ?

## Question 8

Find an integer which is equal to the expression

$$
\left(\frac{0.003}{0.3}-\frac{0.0012}{0.12}+\frac{0.318}{31.8}\right)^{-1}
$$

## Question 9

What is the remainder when $3^{1}+3^{2}+3^{3}+\cdots+3^{2019}$ is divided by 10 ?

## Question 10

In the following figure, half-circles with diameters $|A B|,|A E|$, and $|E B|$ are given. If $|A C|=|C E|=3 \mathrm{~cm}$ and $|E D|=|D B|=1 \mathrm{~cm}$ then what is the area of the shaded (indicated) region?

## Question 11

Let $a, b, c, d, e$ be distinct integers such that

$$
(7-a)(7-b)(7-c)(7-d)(7-e)=75
$$

What is $a+b+c+d+e ?$

## Question 12

We have three water pumps: $A, B$, and $C$.
It takes 6 hours for pump A, used alone, to fill a swimming pool.
Pump B used alone takes 8 hours to fill the same pool.
Pump C is set up to drain/empty the pool. If the above pool is completely full, it takes pump C 12 hours to completely drain it.
Suppose pumps A and B are being used to fill the pool. When the pool is exactly half-full, pump $C$ is turned on by accident. How long will it take to fill the remaining half with all pumps working?

## Question 13

Let $D A B$ and $B C D$ be right triangles. It is given that $|A D|=|D C|,|B E|=18 \mathrm{~cm},|E C|=6 \mathrm{~cm}$ and $|A F|=12 \mathrm{~cm}$. What is the length of $|F E|=x$ in cm ?

## Question 14

When the mean, median, and mode of the list of integers

$$
11,3,5,6,3,3, x
$$

are arranged in increasing order, they form an arithmetic progression.
What is the sum of all possible values of $x$ ?

## Question 15

Two six-sided dice are fair in the sense that each face is equally likely to turn up. However, one of the dice has the 4 replaced by 3 and the other die has the 3 replaced by 4 . When these dice are rolled, what is the probability that the sum is an odd number?

## Question 16

A magic square is a square grid such that the sum of entries in each row, column, and diagonal is equal. This common sum is called the magic constant of the magic square.
The $3 \times 3$ grid below is a magic square with some entries missing (and replaced by the letters $a, b, c, d, e, f$ ).
Determine its magic constant.
